

**Pelvimeter**

cat. No. 318090

The EWEM-Pelvimeter is designed for precise measurements permitting immediate reading in centimetres and millimetres, of even the most dense films. With easy reading elevation scale. The radiopaque measuring unit can be fixed in several positions from horizontal to vertical. The unit is made of opalescent white plastic with a lead inlaid measuring scale. The large round base plate makes it extremely stable.

Length of the scale: 20 cm

net weight: 0.6 kg

Stand with holding device cat. No. 318100

as 318090 but without measuring scale.
To be used as a stand for an x-ray ruler.

**X-ray ruler**

cat. No. 318150

PVC encased with radiopaque compound. Ruler allows immediate reading of measurements on the radiograph with a 2 mm graduation. Available in any length up to 150 cm.

dim: 5 mm thick
40 mm wide

X-ray ruler

cat. No. 318151

as before but reverse

**X-ray ruler**

cat. No. 318345

PMMA encased with radiopaque compound. Ruler allows immediate reading of measurements on the radiograph with a 5 mm graduation. Available in any length up to 150 cm.

dim: 3 mm thick
25 mm wide

X-ray ruler

cat. No. 318346

as before but reverse
